SKILLS

PROGRAMMING LANGUAGES

- Python(Certification)
- C++
- Java(Certification)
- JavaScript(Certification)

DATABASES

- Mysql(Certification)
- PostgreSQL
- Mongo DB(Certification)
- Redis(Certification)

SOFTWARE TESTING

- Selenium
- pytest
- postman
- Manual testing
- test case design
- Kiwi tcms
- Appium

TOOLS & TECHNOLOGIES

- GIT
- API
- JIRA

Languages

- English

EDUCATION

Science and Research Branch University

Bachelor's degree,Computer
Engineering

2022-Present

EXPERIENCE

• QA SPECIALIST

[Quera](#)

Nov 2023 – Feb 2024(Part-time . remote)

- Performed quality assurance testing on **course content**, **exercise systems**, and **question bank**
- Identified and **reported** content and functionality **issues**
- Collaborated with content creation and development teams to enhance course quality
- Verified and validated results in the educational systems

• SOFTWARE DEVELOPER AND ENGINEER

[Rayan Khodro Andish Company](#)

Mar 2024 – Feb 2025(Part-time . On-site)

- Designed and **developed** internal software solutions in **Python** and **C#** to optimize company processes
- **Tested** and evaluated software for accuracy and efficiency
- Developed vehicle diagnostic systems using microcontrollers like **ATmega32** and **STM32**
- Worked on hardware and software projects for **Embedded Systems**, gaining hands-on experience
- Achievements:
- Streamlined internal operations with efficient **software solutions**
- Gained practical experience in software development for industrial systems
- Enhanced expertise in Embedded Systems design and implementation

• QA SPECIALIST

[DGShahr](#)

Feb 2025 – Present(Full-time . On-site)

- Conducted **manual testing** and wrote **automated tests** using tools like **Selenium** and **Pytest**
- Worked with **Git**, **Jira**, and **Postman** for **project management** and **issue tracking**
- Contributed to product development processes including writing **PRDs**, **sprint planning**, and **task management**
- **Analyzed data** and generated reports using **Metabase**
- Managed and tested databases using **PostgreSQL**, **MariaDB**, and **Redis**
- Worked with **Kiwi TCMS** for visualizing tests and gained complete familiarity with the **tcms api** library
- Optimized and improved testing processes and quality assurance in complex development environments

CERTIFICATIONS

- **Machine Learning with Python**
[Maktabkhooneh](#)
- **Advanced Python Programming**
[Maktabkhooneh](#)
- **Task-Oriented Course In Sql**
[Quera](#)
- **Task-Oriented Course In Fundamentals Of Java Programming**
[Quera](#)
"Beta Tester"
- **Task-Oriented Course In Fundamentals Of Javascript Programming**
[Quera](#)
"Beta Tester"
- **Third place in the "Soccer 2D Simulator League" in the Robocup iranopen 2024**
[IranOpen](#)

VOLUNTEERIG

- **Member of the founding board of Computer Science Association**
Science and Research Branch
University
2023-Present
- **Member of the technical committee**
SRCPC Committee
2023-2024
- **Jury Committee(Solution Reviewer)**
SRCPC Committee
2023-2024
"SRCPC is an algorithmic competition that is held every year at Islamic Azad University, Sciences and Research Branch ."
- **SRBIAU_2D Soccer 2D Simulation Team**
Member
2023-Present

KEY ACHIEVEMENTS

- **Third place in the "Soccer 2D Simulator League" in the Robocup iranopen 2024**

PROJECTS

- **PYTHON SELENIUM TEST**
 - **Developed** and executed **automated test cases** using **Selenium** to validate **web application functionalities**.
 - Designed comprehensive test scenarios to identify bugs and inconsistencies in the UI and backend interactions.
 - Used **Python scripts to automate** repetitive tasks, increasing test efficiency and coverage.
 - Gained hands-on experience in working with Selenium WebDriver and **implementing test automation** best practices.
- **RAYAN_APPS**

"Rayan APPs is a **Python**-based software developed to streamline various processes within Rayan Khodro Andish Company. The program consists of several sub-applications, each designed to optimize specific tasks within the company.

 - Developed a Python-based software suite to automate and optimize diagnostic and operational processes within Rayan Khodro Andish Company.
 - Designed and implemented modules such as **Diagnostic ID Finder, Error Finder, Mask Finder, and File Generator** to streamline critical tasks.
 - Conducted **extensive testing** on each module to ensure accuracy, **reliability**, and **user-friendliness**.
 - Identified and **resolved bugs** in complex algorithms and database interactions, improving system performance and usability.
 - Enhanced the overall efficiency of company operations by automating repetitive and error-prone tasks
- **INTERVIEW PROJECT | DGSHAHR TEST**
 - Completed as part of the interview process for the **QA Specialist** role at **DGShahr**
 - Demonstrated expertise in test automation using **Selenium**
 - Identified and **reported bugs, documenting issues** with detailed error reports
 - Implemented **real-world test scenarios** to evaluate software quality and **functionality**
 - Showcased **problem-solving** and **testing skills** for evaluating complex software solutions
- **AUTOMATED TESTING PROJECTS | DGSHAHR**
 - **Loan and Guarantee Request Flow Testing**
 - Developed automated tests for user flows related to loan and guarantee requests using **Selenium** and **Pytest**
 - **Selenium** tests ensured the integrity of the **frontend** flows, while **Pytest** tested the **backend** processes
 - Integrated with **Kiwi TCMS** via **tcms_api** to track and visualize test results
 - Created **test runners** in Kiwi TCMS with **test plans, test cases**, and real-time pass/fail status updates, providing enhanced **visual reporting for test results**
 - **Random Product Image Test on Market Page**
 - Created a test that randomly selected 10 products every 20 minutes on the [DGShahr market](#) page and checked if all product images loaded correctly
 - In case of errors, the failing image URLs were reported to a **Google Sheet** for tracking
 - The next test run **cross-checked** the reported errors, updating the status if issues were resolved
 - **Product Purchase Flow Testing**
 - Developed an automated test to simulate and verify the product **purchase flow** on [DGShahr](#)
 - Results were visualized and tracked in **Kiwi TCMS**, ensuring the accuracy and efficiency of the purchase process
